

Instructivo básico para los desarrolladores del proyecto final:

1. Los usuarios de windows instalen <https://gitforwindows.org/>, los de gnu/linux simplemente git, osx: <https://git-scm.com/download/mac>. Luego tendrán que abrir el directorio clonado con la terminal correspondiente, en windows: gitbash.
2. Clone de la solución, (si descargan el zip desde el repositorio no incluirá el directorio .git): Dentro del directorio que quieran trabajar, en la terminal correspondiente, escriben:
 - git clone <https://github.com/gngf-programming/edi3-pf-2018.git>
3. Creación de su propio branch, dentro del directorio clonado desde la terminal escribir:
 1. Para nuevos desarrollos:
 - git checkout -b 201810XX-NOMBREDETAREA-ND
 2. Para tests:
 - git checkout -b 201810XX-NOMBREDETAREA-QA
4. A partir de ahí podemos empezar a trabajar en el código y una vez terminado hacer un “add” de los cambios (pasar al estado Staged), si usan git add * luego limpiaremos los archivos innecesarios que no detecte el .gitignore, lo correcto sería agregar archivo por archivo que sea a modificado, pero este es el instructivo básico:
 - git add *
5. El segundo estado en GIT es History y para pasar al mismo tenemos que usar el siguiente comando:
 - git commit -m “Acá va un comentario de lo que la tarea se trata.”
6. Luego subiremos los cambios de nuestro branch (hay que usar el nombre de nuestro branch, no copiar textualmente lo que está abajo), para que quede un registro en el repositorio:
 1. Para nuevos desarrollos:
 - git push origin 201810XX-NOMBREDETAREA-ND
 2. Para tests:
 - git push origin 201810XX-NOMBREDETAREA-QA

Todos los pasos de la terminal en una imagen:

7. Por último si probamos nuestro código a conciencia y todo funciona, podemos solicitar un PULL REQUEST ó MERGE REQUEST, que es el proceso de que nuestro cambios en el branch se puedan mezclar con la rama MASTER (principal):
